

# Title

React Movie Recommendation Interface

## Technologies Used

React, JSX, React Hooks (useState), CSS for styling & JavaScript.

Figure 1: Initial Application Load

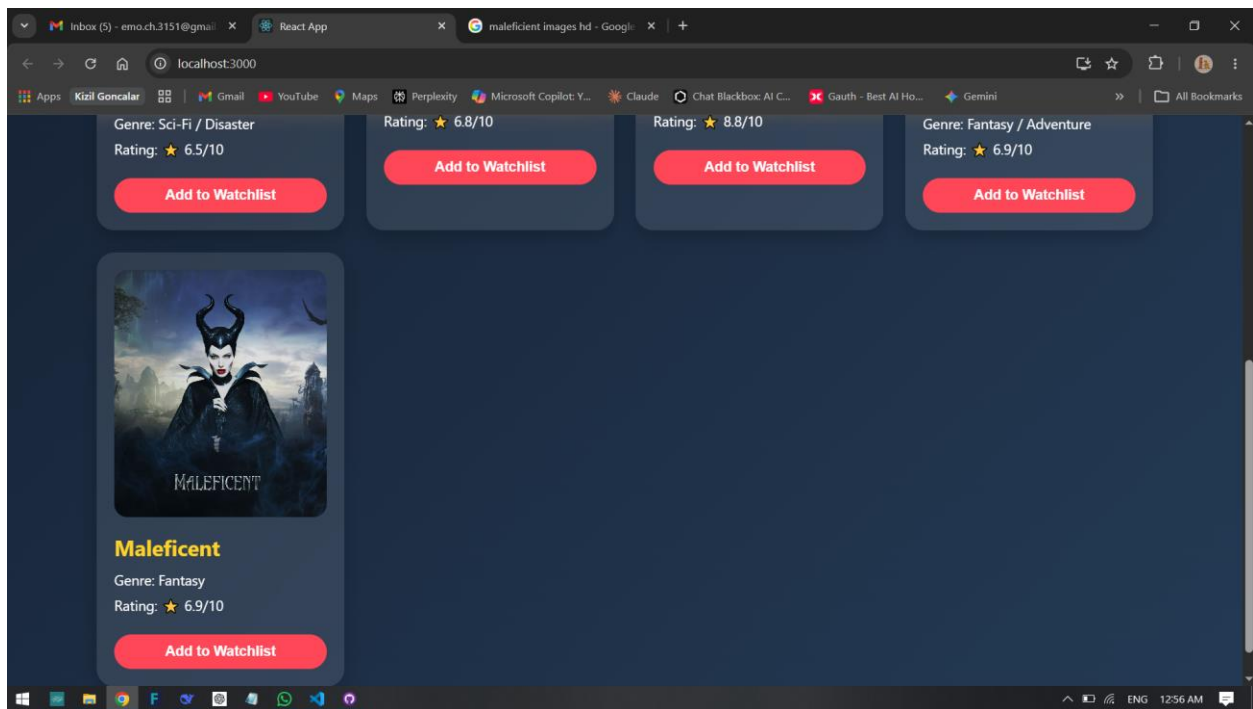

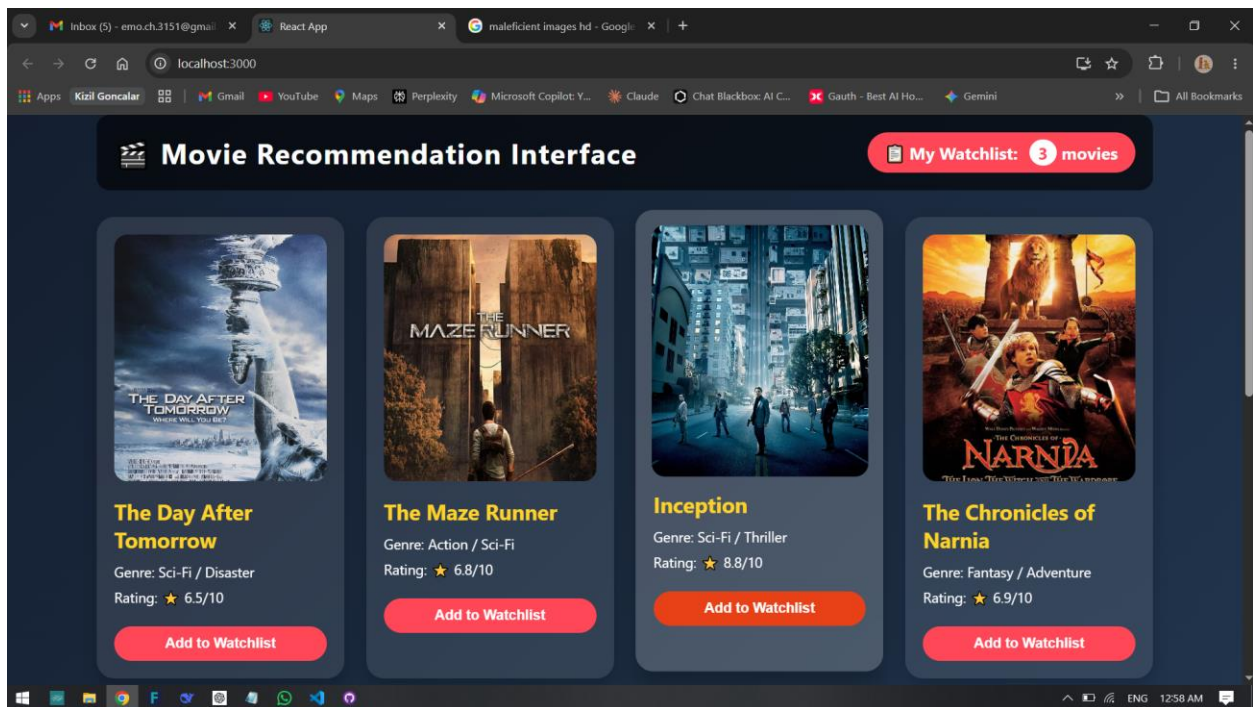

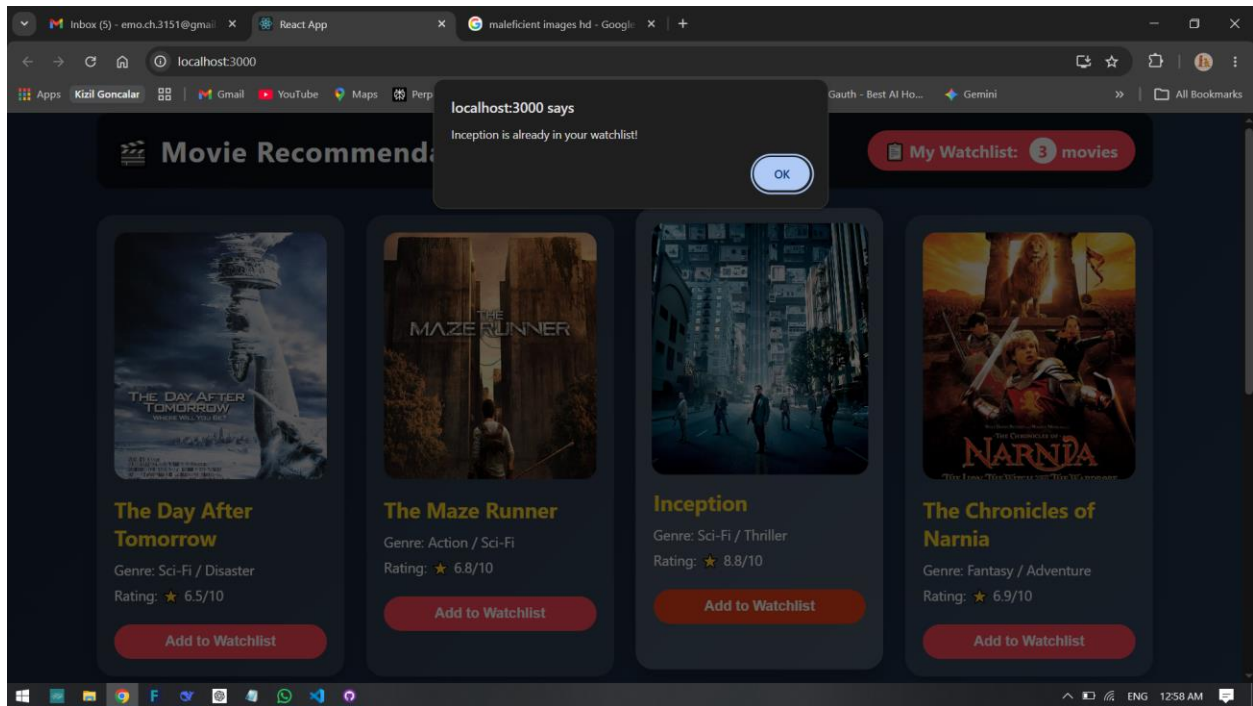

Figure 2: After Adding Movies to Watchlist

**Figure 3: Duplicate Prevention Alert**

## Conclusion

The resulting application allows users to browse movies, add them to a watchlist, and see the count update instantly without page reload. This demonstrates the power of React for building dynamic front-end applications.
